

Innovation in the Pursuit of Simplicity

IPFUSION WHAT IS CONTROL?

IPFusion Control is electronic security control software that connects any number of systems, devices, and technologies together to create unparalleled situation awareness and facility control. The commercial-off-the-shelf platform was designed from the ground up to provide comprehensive, reliable security integration in high-security facilities. Control is extremely simple and quick to deploy and requires no scripting or code to configure.

Modular Infrastructure

Control's modular infrastructure connects many disparate systems and devices into a single unified dashboard. Control was designed to connect systems through an open, modular, and extendable framework to deliver site specific integration needs. IPFusion is partnered with security system manufacturers to keep the integration library current.

Full Security Awareness

Control provides increased safety and security to facilities and institutions by connecting systems together regardless of manufacturer or vintage. This unique software makes it possible for an electronic security solution to be tailored to the unique needs of any facility and easily expanded as needs change over time.

Connected Systems

- Access Control
- Digital Signage
- Elevators
- Fire Alarm
- Intercommunication
- Intrusion Detection
- Lighting
- Mass Notification
- Network Monitoring
- Nurse Call
- Perimeter Detection
- Programmable Logic Controllers (PLCs)
- Public Address and Paging
- Real Time Location
- Shooter Detection
- Video Surveillance
- Wired and Wireless Duress
- Wireless Radios

Non-Proprietary

The Control platform may be deployed, serviced, and maintained by any of our network of trained and certified partners.

Go to Market Approach

As a software manufacturer, IPFusion relies on our global network of partners to distribute and deploy the Control platform. Our Partners have full access to IPFusion resources including Business Development Professionals, Sales Engineers, Professional Services, Project Managers, and 24/7 Technical Support.

Who we are - History

IPFusion was born over a decade ago to solve a problem in the industry with physical security integration software. Existing solutions were often proprietary, expensive, and complicated. There was no purpose-built software readily available to solution providers and system integrators. Control was developed to be purpose-built, simple, vendor neutral, and cost effective. Control has been successfully deployed across North America in a variety of industries.

Primary Industries

- Corrections
- Courts
- Education
- Energy
- Healthcare
- Hospitality
- Mental Health
- Police
- Transportation

Value Proposition

LOWER RISK

Control integrations are all developed, quality assured, and verified before commercial release which reduces the risk of issues during installation.

FASTER

Control's Designer application was built to simplify normally complex system configuration. The solution embraces a 'Drag-Drop-Configure' philosophy removing the reliance on scripting or custom code.

LOWER COST

Control offers a highly competitive licensing model and greatly reduces deployment labour costs when compared with custom or bespoke solutions.

HAVE
MORE
CONTROL

Competitive Advantage

- Agnostic Connectivity - Vendor Neutral to work with all third-party systems and devices so clients can choose the system that is best for them without compromising integration.
- Scalable - Big and small, the Control software can provide a cost-competitive solution.
- Depth of Integration - Complete, certified integrations with leading manufacturers.

IPFUSION GRAPHICAL DASHBOARD

Suits your need for a User Interface with an easy, customizable UI engine.

FAQ

FREQUENTLY
ASKED
QUESTIONS

What is the difference between Control and custom integration software?

IPFusion's commercial-off-the-shelf Control software suite is sold, deployed, and supported through a network of partners. This approach is superior to one-off, custom software solutions as it provides a cost-effective, stable, and repeatable solution.

What if I have a system that Control does not currently integrate with?

The Control software roadmap is aligned with customer needs and software is released quarterly. Control has created a powerful rapid development process to create new integrations that are vetted by the product management team and rigorously tested by our Quality Assurance team against real systems prior to release. Our unique approach to software integration allows Control to easily adopt new systems into the Control Integration library.

Mandates and legislation are constantly introducing new system and procedure requirements. How does Control allow for continuous configuration changes / updates to help facilities keep up to evolving expectations?

The administration and management of the application is built with a 'drag-drop-configure' philosophy to make it as simple to use, maintain, and support, with no need for in-depth knowledge of protocols or the third-party systems. This philosophy allows for changes to be made and deployed rapidly and as frequently as necessary with little risk to system stability.

Can Control connect systems between multiple facilities?

Yes, with proper network infrastructure in place Control can connect systems from multiple geographically diverse facilities together into a consolidated dashboard with ease. Remote site monitoring allows for instant notification of issues and alerts to a centralized operations center.

Can Control support legacy systems?

Yes. The extensive Control integration library contains integrations for many systems, new and old. Control can provide modern integration without the need for upgrading systems. Once you're ready to upgrade in the future, Control will connect with both the old and new systems during the upgrade to provide a standard operational model while abstracting the nuances of the connected systems.
